

Color Background LightScribe Media

Color Background LightScribe technology offers consumers and businesses a simple, no-hassle way to burn professional, silkscreen-quality labels on their CDs and DVDs. Using the same laser that burns data in their disc drives, customers burn their data as always, flip the disc over, re-insert it into the drive and burn a precise iridescent label. Color Background LightScribe media is available on 5 various background color discs: Yellow, red, blue, green and orange.

The iridescent color background LightScribe media is an ideal solution for organizing, filing and storing digital images, music and more! Verbatim media provides uncompromised quality for ultimate performance while burning at high speeds. This media is compatible for maximum speed recordings of 52X (CD) and 16X (DVD).

Key Components

LightScribe Direct Disc Labeling technology requires three elements:

LightScribe-enabled optical disc drive (ODD) – The drive can be either built into your desktop or notebook PC or you can use an external disc drive.

LightScribe-compatible media – LightScribe CD/DVD's utilize a special coating applied to the disc surface that interacts with the laser of the LightScribe-enabled disc drive. Consumers can readily identify LightScribe-compatible media through the LightScribe logo found on media packaging and in the lower hub of each disc

LightScribe-supported software applications – In addition to a label-making software, you will need LightScribe System Software (This software may be included with your hardware, or it may need to be installed separately). With this software, you can create one-of-a-kind designs for your CDs and DVDs using your own photos, text and artwork.

Part Number	Description	Pack Size	Speed	Capacity
95460	Color LightScribe CDR	25Pk Spindle	52X	80Min/700MB
96432	Color LightScribe DVD+R	25Pk Spindle	16X	4.7GB/120Min
96433	Color LightScribe DVD-R	25Pk Spindle	16X	4.7GB/120Min
