

EZCaster: The Easiest Way to Broadcast Live Video Online!

The EZCaster encoder and smart online management software make streaming live video and creating on-demand videos as simple as turning on a TV! Broadcast and publish video with the touch of a button. Just plug in the AC power, Internet connection, and any audio/video source. Turn on the Encoder, and when you're ready to broadcast to the world, touch the Start button and broadcast live instantly. It's actually as easy as that!

There are two major parts to streaming video—the video compression/streaming, and publishing videos on your website. Until now, encoding systems were wildly complicated and only created video streams and files. With the Touch Screen Encoder, your website's html page will automatically be updated with a "watch live video" link. Users will just click the link and start viewing your live broadcast! Call Microboards at 800-646-8881 for more information on this exciting new technology.

Model No.	Encodes	Inputs	Other
EZWMV	WMV	Analog Composite RCA	
EZWMV-BX	WMV	Analog Composite Dongle, XLR/BNC	
EZ264-BX	MP4, Flash Video	Analog-Composite Dongle, XLR/BNC
