

## A Great Product Gets Better

The Rimage 2000i is the premier product of its type in the marketplace today. The 2000i features all-steel construction for long term durability, a great HP inkjet print engine, robust Rimage software, and so much value for the dollar that we know you will want to share it with others on your network. We'd like to help!

Effective February 1, you can buy a 2000i with OfficeNet software for only \$95 over the un-networked price. This offer **saves you over \$800** compared to normal system and software pricing. This promotion will be available through all of our Value Added Resellers in the US and Canada through June 30th, 2011.

### What is OfficeNet?

With OfficeNet, you receive a full client/server software package. The server portion gets loaded on the PC that you connect to the 2000i itself. The client portion can then be loaded onto any number of remote PCs on your network. These remote users can then run QuickDisc and send jobs to the server PC that you just connected to the 2000i. Here is a handy guide to all of the networking options available from Rimage.

With this network option, you will have the best of both worlds - a robust disc publishing platform at a low acquisition price, and the ability to have others submit jobs remotely, saving all of you time and money!

Software Functionality	OfficeNet Software Suite for 2000i	Network Software Suite for 3400	Producer Software Suite for all N models
Basic networking software/remote client access for PCs	x	x	x
