

Product Brief | Rimage Disc Copy Station™

Save Time and Money with an In-house Solution

Built on the Rimage Producer™ 8200N and Professional™ 5410N disc publishing platforms, the Disc Copy Station is the industry's highest-performing, most reliable solution for automatically copying and creating CDs, DVDs and Blu-ray Disc™.

Think of the productivity you gain from having a nearby multi-function paper device that scans, copies and prints. Now, think of the productivity you will gain by having a multi-function optical disc device that can read discs, copy them (top and bottom) and of course record and print jobs sent from your desk over the network. Your Rimage Disc Copy Station can work in walk-up mode through a touch screen, can produce jobs submitted over its network connection and can queue jobs submitted by multiple users — just like your paper-based multi-function device.

Benefits

Dual functionality in a single package

In addition to copying existing discs, the Disc Copy Station can be used to produce new discs with customized content and direct-to-disc printing.

Streamlined workflow

Connect an Ethernet cable and you're on the network—single users or workgroups have full access to Rimage software for workflow integration and custom solution development.

Two choices, one solution

The 8200N Disc Copy Station offers robust capacity, giving businesses the functionality of a disc copy appliance plus increased production capabilities.

The 5410N Disc Copy Station is designed to tuck into tight spaces, offering full functionality in a compact design and a small footprint.

Features

- Integrated DiscWatch™ Status Light
- Integrated high resolution digital camera
- Single and bulk copy modes
- Easy-to-use, adjustable-angle touch screen monitor
- Up to 4 quick-release Blu-ray recorders
- LCD interface displaying system status
